The WHO e-Pocketbook provides up-to-date, evidence-based clinical guidelines for children requiring hospital care. It is the electronic version of the widely used Pocket book of Hospital Care for Children (Blue Pocketbook).

Designed for doctors, nurses and other health workers responsible for the care of children, these guidelines focus on the management of major causes of childhood mortality in developing countries, including:

- Neonatal illness, including low birth weight, prematurity, sepsis, perinatal asphyxia, and congenital anomalies
- Pneumonia and other breathing problems, including bronchiolitis, asthma and tuberculosis
- Diarrhoea, acute and chronic
- Fever, including malaria, meningitis, septicaemia and rheumatic fever
